

Fish Bolt with Nut – RDSO/T-11501

Fish bolt with nut manufactured to RDSO drawing T-11501, M18 to M25, for rail joints.

RDSO/T-11501

Manufactured to the RDSO drawing and alteration quoted in your tender or order.

M18 to M25

Fish bolt sizes from M18 to M25, each supplied with its nut.

Built for rail joints

Clamps fish plates to the rail web to keep joints aligned under traffic.

ABOUT

Fish bolts

Fish bolts with nuts to RDSO/T-11501, made in Bhilai for Indian Railways divisions and track contractors. Quote the drawing number and alteration and we manufacture to that version.

DESCRIPTION

Overview

Fish bolts clamp a pair of fish plates to the web of two rail ends, holding a rail joint in line and transferring load across the gap. Because they sit in the most heavily worked part of the track, they have to match the drawing exactly — the bolt diameter, head and neck shape, thread and nut all follow the RDSO drawing the railway specifies.

S A Engineering manufactures fish bolts with nuts to **RDSO/T-11501** in sizes from M18 to M25. We also make fish bolts to [RDSO/T-1899](#) and [RDSO/T-11503](#), so mixed requirements can be supplied together.

Where they are used

- Fish-plated rail joints on running lines and sidings
- Track renewal and maintenance work by railway divisions
- Track contractors executing railway and industrial siding projects
- Steel plant and colliery sidings built to railway standards

Specification

Drawing	RDSO/T-11501
Size range	M18 to M25
Supplied with	Nut
Made to	The drawing number and alteration quoted on the order
