

Foundation Bolts (up to M64)

Foundation bolts up to M64, manufactured to your drawing.

Up to M64

Heavy foundation bolts for large machinery and structural bases.

Made to your drawing

Shape, length, bend and thread exactly as drawn.

Site-ready sets

Supplied with the nuts and washers your drawing calls for.

ABOUT

Foundation bolts

Foundation (anchor) bolts up to M64 for machinery bases, structural columns and plant equipment, manufactured to the shape, length and thread shown on your drawing.

DESCRIPTION

Overview

Foundation bolts anchor machinery, columns and equipment to concrete. They are cast into the foundation or set in pockets before grouting, and the part above the concrete takes the base plate, nuts and washers. Getting the embedment, projection and thread length right is what makes the base plate land correctly on site.

S A Engineering manufactures foundation bolts up to **M64** to the customer drawing — including the bolt shape, overall length, bent or anchored end, thread length and nuts.

Typical applications

- Machinery and motor foundations in steel plants and workshops
- Structural steel columns and base plates
- Crushers, conveyors and material-handling equipment
- Tanks, towers and plant equipment bases

Specification

Size	Up to M64
Shape	As per drawing (straight, bent or anchored end)
Made to	Customer drawing
Typical use	Machine foundations, structural bases
